SIMCommander AntiVirus Analyzer

Nowadays, most of computers have Antivirus applications installed. However those AntiVirus applications only have limited functions and features on "Reporting" and "Proactive Alerting" areas. That's why users still have the following concerns:

- Why computers infected by viruses again and again?
- How to protect against new virus?
- How many computers are using outdated AntiVirus client version or virus pattern?
- Which computer first infected by virus?
- How to discover other computers infected by the same virus?
- How can I take action proactively?
- Missing real-time AntiVirus information for analysis.
- Missing meaningful and actionable reports.

SIMCommander AntiVirus Analyzer

SIMCommander AntiVirus Analyzer is an easy-of-use AntiVirus reporting and analysis software that enhances AntiVirus application in reporting & proactive alerting capabilities plus turns AntiVirus events/logs into "Actionable and Meaningful" information.

BENEFITS

- Automatic visualize and report virus activities in your network
